

CORRECTIVE ACTION REPORT

PSC-2026-001

CAR Information

CAR Number	PSC-2026-001	Status	Submitted to PIC
Vessel	—	Target Date	11 Feb 2026
Inspection Type	PSC	Inspection Date	10 Feb 2026
Port	Mumbai	Created	10 Feb 2026 14:01

Deficiency Details

Deficiency Code	01315
Description	Not filled correctly
Action Code	30
Cleared	No

Root Cause Analysis

CLC Codes:

#	CLC Code / Custom Cause
1	CLC Item 1-2
2	CLC Item 2-1
3	CLC Item 1-1
4	CLC Item 2-2

Root Cause Summary:

Need to be more careful. Better planning Detention narrative / detention decision summary, not “the deficiency”
Required only when is_detention = true Short, single field, plus optionally “release conditions” if you want to be precise

Corrective Actions

#	Type	Description	Due Date	Completed	Status
---	------	-------------	----------	-----------	--------

1	Immediate	ose don't always match 1:1. Examples where codes won't fully carry meaning: Detention due to "ISM ineffective implementation" or "multiple deficiencies indicating systemic failure" It's a detention decision based on pattern, not a single code. Detention release conditions like "class attendance required" / "flag state approval" / "re-inspection scope" That's operationally crucial, but not captured by def/action code. The deficiency code is generic but the remark specifies the exact equipment, location, test, or circumstance. So what should you do with that comment? Keep it and fix it, but redefine what "detention_reason" means so it doesn't duplicate deficiency capture. Use it as: Detention narrative / detention decision summary, not "the deficiency" Required only when is_detention = true Short, single field, plus optionally "release conditions" if you want to be precise Best design pattern (minimal + strong) Do both: A) Structured Deficiency items: def_code, action_code, and a boolean is_detention_related This gives analytics, repeat tracking, dashboards B) Narrative Inspection-level detention_reason (or rename to detention_summary to avoid confusion) Validation rules: If is_detention = true → required If is_detention = false → auto-clear If you really want to avoid storing free text Then you must store an equivalent narrative elsewhere (for example: an "overall PSC remarks" field) and enforce it for detentions. Otherwise you're creating a reporting and audit gap. Practical call Fix the backend storage. The frontend already has it, and the cost is low. The payoff is high when you have to explain a detention to management, charterers, vetting, class, and auditors.	—	No	Pending
2	Long Term	Why deficiency code + action code is not enough Even if you tag the deficiency that "caused" detention, that is still structured metadata, not the detention narrative. In practice you need to store: Which deficiencies triggered detention (your def code + action code, plus a "detention-related" flag is great) What the PSC officer actually detained the ship for, in plain language, including any conditions for release and inspector phrasing Those don't always match 1:1.	—	No	Pending
